

GradPilot AI

Live Site Audit · gradpilotai.com

Vercel / Next.js production site — 19 June 2026

Headline finding

The live site is not the product the 16 June audit described. gradpilotai.com is a newly built Next.js marketing site on Vercel, running in pre-launch / waitlist mode — no working app, no checkout, empty blog. The Base44 app (jobs, mentors, blog) is a separate system a visitor does not reach.

Architecture & hosting (verified live)

Item	Finding
Framework	Next.js (App Router + Turbopack), RSC, prerendered/static
Host	Vercel (team 'Gradpilot AI'), edge-cached
Serving region	iad1 — US East (users + DB are UK/EU)
Domain	gradpilotai.com → 308 → www.gradpilotai.com
app subdomain	app.gradpilotai.com not reachable via this Vercel team
Backend	Supabase tqpsvhtnoqhrvkntzlvz (Postgres 17, eu-west-1, healthy)

Pages live: /, /about, /blog (empty), /waitlist, /login, /privacy, /terms + homepage anchors. No /signup — entry is waitlist + sign-in only. Landing page itself is strong and content-complete (7 features, pricing Free/Pro £9.99/Premium £19.99, 8-item FAQ, founder story).

Findings by severity

Area	Sev	Finding
SEO	HIGH	/robots.txt and /sitemap.xml both 404; og:url points to *.vercel.app; no canonical tag; no JSON-LD structured data.
Analytics	HIGH	No analytics at all (no GA4/PostHog/Vercel/Plausible). Waitlist traffic & conversion are unmeasurable.
Security headers	MED	Only HSTS set. Missing CSP, X-Frame-Options, X-Content-Type-Options, Referrer-Policy, Permissions-Policy. x-powered-by leaks Next.js.
Content	MED	/blog is empty (placeholder). Keyword strategy has no content to rank; the 10 posts live on Base44, not here.
Launch-readiness	LOW	Pricing CTAs all → /waitlist (no Stripe checkout live); verify /login, legal pages, ICO/GDPR; US-East region vs EU DB.
Supabase backend	GOOD	2 security warnings (is_admin by design; enable leaked-password protection). Performance clean except 2 deliberate policies (usage_tracking fixed this session).

Done this session (19 June)

- Audited the live Vercel site end-to-end (HTTP, headers, SEO, page inventory).

- Applied Supabase migration **0002** — resolved the 2 usage_tracking auth_rls_initplan warnings (verified).
- Produced drop-in fixes under **site-fixes/**: robots.ts, sitemap.ts, metadataBase/canonical, security-headers next.config, JSON-LD components, analytics guide.

Remaining work (owner action)

Quick wins (paste from site-fixes/, redeploy)	This week / before launch
• Add robots.ts + sitemap.ts • Fix og:url/canonical to www domain • Install Vercel Analytics + waitlist event • Enable Supabase leaked-password protection	• Add security-headers block (CSP report-only first) • Add JSON-LD (Org + FAQ) • Submit sitemap in Google Search Console • Port blog posts; wire Stripe; pick one stack

Limitations: Vercel MCP token is SAML-scoped (no build logs / project metadata); legal page bodies not deep-read; live Next.js source is not in this repo, so code fixes are provided as drop-in files.
